Employment History

Fullstack Engineer, Veiligwerk, Amsterdam

JUNE 2023 — PRESENT

Working with microservices, MySQL databases, React, Redux, Typescript and Node.js to develop API's, migration scripts and reactive front end components for the risk prevention and security software that we provide to construction companies to reduce accidents.

Writing units tests for certain classes a functions.

Implementing and orchestrating GPT agents to increase productivity.

Implementing new solutions where possible such as using signals instead of hooks where possible to avoid expensive re-rendering of entire components.

Refactoring the code base where possible to be faster and more readable by, for example, unnesting if statements using guard clauses.

Embedded Analytics Consultant, Biztory, Amsterdam

NOVEMBER 2021—AUGUST 2022

Embedding Tableau in clients' web applications and existing portals

Working with the Tableau API's for both performance analysis and automation of tasks.

Solving our clients' Tableau Server installs, upgrades and performance-related issues.
